

What is claimed is:

1                    1(currently amended).        A pull-out guide for drawers, ~~with~~  
2        **comprising:**  
3                    ~~4.1~~ a carcass rail ~~(2)~~,  
4                    ~~4.2~~ a pull-out rail ~~(5)~~,  
5                    ~~4.3~~ a central rail ~~(3)~~, and ~~also with~~  
6                    ~~4.4~~ a control roller ~~(6)~~ ~~which 1.4.1 is~~ mounted rotatably about an axis  
7                    on the central rail ~~(3)~~ and ~~1.4.2 is~~ in engagement with the carcass rail ~~(2)~~  
8                    and the pull-out rail ~~(5)~~.

1                    2(currently amended).        The pull-out guide as claimed in claim 1,  
2                    wherein the control roller ~~(6)~~ comprises a bearing part ~~in the form of~~  
3                    **comprising** a hard body ~~(17)~~ and a soft body ~~(20)~~ ~~which~~, **and wherein the**  
4                    **soft body** at least in part projects in a ~~the~~ radial direction ~~in relation to the~~  
5                    ~~latter~~ **relative to the hard body.**

1                    3(currently amended).        The pull-out guide as claimed in claim 2,  
2                    wherein the soft body ~~(20)~~ projects over only part of ~~the~~ an axial extent of  
3                    the hard body ~~(17)~~.

1                    4(currently amended).        The pull-out guide as claimed in claim 2  
2                    ~~or 3~~, wherein the soft body ~~(20)~~ is arranged in ~~the~~ a region of ~~the~~ an axial  
3                    end side of the control roller ~~(6)~~.

1                    5(currently amended).        The pull-out guide as claimed in ~~one of~~  
2                    ~~the preceding claims~~ **claim 1**, wherein the control roller ~~(6)~~ ~~is designed as~~  
3                    **comprises** a two-component construction.

1                    6(currently amended).        The pull-out guide as claimed in **claim 2**  
2                    ~~one of claims 2 to 5~~, wherein the hard body ~~(17)~~ and the soft body ~~(20)~~ ~~are~~  
3                    **comprise** two separate components which are assembled before mounting  
4                    of the control roller ~~(6)~~.

1           7(currently amended).     The pull-out guide as claimed claim 2  
2 ~~one of claims 2 to 6~~, wherein the soft body ~~(20)~~ is arranged between a  
3 shoulder ~~(19)~~ of the hard body ~~(17)~~ and a bearing plate ~~(10, 30)~~ of the  
4 control roller ~~(6)~~.

1           8(currently amended).     The pull-out guide as claimed in claim 2  
2 ~~one of claims 2 to 7~~, wherein the soft body ~~(20)~~ is fixed between a shoulder  
3 ~~(19)~~ of the hard body ~~(17)~~ and a retaining washer ~~(25)~~.

1           9(currently amended).     The pull-out guide as claimed in ~~one of~~  
2 ~~the preceding claims~~ claim 1, wherein ~~the spindle (13, 23) on which~~ the  
3 control roller ~~(6)~~ is mounted on a spindle having ~~has~~ a cross section that  
4 ~~which~~ differs from circular ~~with a~~ by having a relatively larger diameter in  
5 a the pull-out direction of the pull-out guide.

1           10(currently amended).    The pull-out guide as claimed in claim 9,  
2 wherein the cross section of the spindle ~~(13, 23)~~ is ~~designed to be~~ roughly  
3 elliptical with a the major axis extending in the pull-out ~~pulling out~~  
4 direction.

1           11(currently amended).    The pull-out guide as claimed in ~~one of~~  
2 ~~the preceding claims~~ claim 1, wherein ~~the spindle on which~~ the control  
3 roller ~~(6)~~ is mounted on a spindle and the spindle is mounted is  
4 ~~designed, preferably 20 in one piece, on a holding device (10, 30) which~~  
5 ~~can be connected~~ snap-connected to the central rail ~~(3) by snapping or~~  
6 ~~the like~~.

1           12(currently amended).    The pull-out guide as claimed in ~~one of~~  
2 ~~the preceding claims~~ claim 1, wherein the control roller ~~(6) can be fixed on~~  
3 its is snapped onto a bearing spindle ~~(13, 23) by snapping or the like~~.
